Jena, 05.05.2022

Heracle is an international company in the field of optical fibers for special applications in the areas of medical technology, analytics & sensor technology as well as industrial laser transmission, located in the Technology and Innovation Center on Beutenberg campus in Jena. For the earliest possible start date, we are looking for a...

Team member in Development & Product marketing

(Jena location, full-time, open-ended employment contract)

Optical fibers can revolutionize many markets than just communications! Modern optical fibers open new perspectives in applications such as fiber optic sensors and measurement technology, lighting, medical technology and material processing. Such new applications require highly specialized fibers with individually tailored property profiles. Within the scope of our public research projects, we not only develop laser fibers but also support the realization of a comprehensive and internationally unique technology platform to produce special fibers for commercialization.

As our team member you:

- supervise ongoing research projects and support the product management of our portfolio
- identify product-relevant technology and market developments and align the research activities with customer needs
- follow and analyze market trends to formulate requirements and business plans to position products
- accompany product developments as well as customer-specific modifications
- manage and develop projects including their cost calculation and analysis, as well as measure projects performance and maintain comprehensive project documentation

These are your qualifications:

- successfully completed degree in a technical field (e.g., physics, electrical engineering, laser and optical technologies), preferably with a specialization in business management or a comparable, suitable qualification
- passion for photonics and interest in current technology trends and thus solid product and application knowledge in the field of optical technologies (e.g.: Fiber optic technologies; microscopy; lasers; laser technology; optoelectronics).
- initial hands-on experience in product management and sales and/or work in public research projects
- interest in interdisciplinary work, excellent analytical and conceptual skills, market- and goal-oriented thinking, as well as strong customer focus
- ability to communicate complex information and present it clearly
- high degree of cooperation and team spirit, also on international level
- high motivation, commitment, and ability to work independently
- willingness and ability to carry out (inter)national business trips
- fluent business language skills (oral / written) in German and a good command of English
- confident use of common MS Office programs,
- knowledge of Office 365 programs and apps (Sharepoint, etc.)

This is what we offer you:

- Entrepreneurial freedom to make a big difference and take on responsibility quickly
- Exciting and responsible job in a small international team
- Flat hierarchies and short information channels
- Individual development opportunities in a high-tech environment
- Flexible, individual working hours & home-office option for work-life balance

Apply now:

We look forward to receiving your application, stating your earliest possible starting date and your salary expectations! Please send your application to peggy.baerenklau@heracle.de
